# Software development techniques

## Unit testing

- Unit = smallest behaviour in code
- Test failure → exact location

## Test First Development

- Create test before the code
- Work from how the code will behave

# Preparing the test bench

Preparing the test bench:

- ➊ Import the utility library
- ➋ Decide on separation method
  - ▶ Line by line → No editing test bench
  - ▶ Start/Stop
  - ▶ Partitioned (recommended)
- ➌ Create command file if needed

# Modified test bench example

Old test bench:

```
...
assert q = '0'
report "Wrong output value at startup" severity FAILURE;
d <= '1';
    WAIT FOR clk_period;
    assert q = '1'
report "Wrong output value at first test" severity FAILURE;
...
```

Modified test bench:

```
...
—Test 1
check_value(q = '0', FAILURE, "Wrong output value at startup");
write(d, '1', "DFF");
check_value(q = '1', FAILURE, "Wrong output value at first test");
...
—End 1
...

```

# Running the job

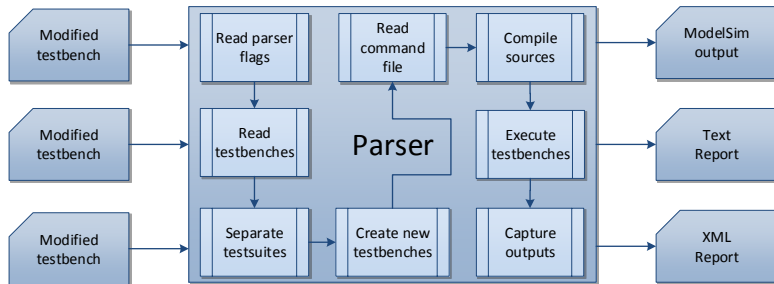

Running the job:

- 1 Create new job at Hudson-CI
- 2 Optional: set for import from revision control source
- 3 Set correct parser flags in shell command
- 4 Build & check results

```
python src\testbench-parser.py -m partitioned -l sim\tb_dff_r.vhd
```

# Script workflow

## Specialized python script

Steps of the parser are logged separately

# Results

- Multiple open-source projects converted
- Tested with Git, Hudson-CI & Bitvis

S	W	Job ↓	Last Success	Last Failure	Last Duration	Console
		VHDL-AES	1 min 15 sec ( <a href="#">#30</a> )	3 mo 4 days ( <a href="#">#16</a> )	41 sec	 
		VHDL-Bitvis	38 sec ( <a href="#">#35</a> )	1 mo 7 days ( <a href="#">#23</a> )	24 sec	 
		VHDL-CRC	3 mo 1 day ( <a href="#">#12</a> )	1 min 3 sec ( <a href="#">#13</a> )	5,5 sec	 
		VHDL-SHA	N/A	52 sec ( <a href="#">#5</a> )	6,2 sec	 

- Successful runs when VHDL code OK
- Partially completed test-runs even with faults in code
- Unsuccessful runs only due to compilation errors

# Commentaries on developing VHDL

- Outdated practices
  - ▶ An industry stuck in 1993
  - ▶ "Don't fix what isn't broken"
- Hardware engineers are not software developers
  - ▶ Little to no software development experience
  - ▶ Taught by seniors at work
- VHDL has no reflection or introspection
